## PROJECTS

### ❑ PASPORT: A SECURE AND PRIVATE LOCATION PROOF GENERATION AND VERIFICATION FRAMEWORK-

Recently, there has been a rapid growth in location-based systems and applications. Using PASPORT, users submit a location proof (LP) to service providers to prove that their submitted location is true. PASPORT has a decentralized architecture designed for ad hoc scenarios in which mobile users can act as witnesses and generate LPs for each other. It provides user privacy protection as well as security properties, such as unforgeability and non transferability of LPs.

### ❑ PORTFOLIO:

using front-end tools such as HTML, CSS, JavaScript, I have developed these project from scratch.
